ABSTRACT

In Algeria, the statistics provided by the Department of Transportation cite more and more alarming figures concerning road accidents: 20,000 accidents occur each year involving more than 4,000 deaths and 26,000 injured involving disabled for life. To stop the carnage road authorities have launched a series of actions involving different institutions in different departments. In this article we will present the road safety situation in Algeria. The approach is then to analyze the chronological development of public actions taken in the field of road safety. It also presents the conditions that led to the selection and implementation of these actions.
